

6S Success

STATUS REPORT · 2026-08-19 09:20 · EVERY FIGURE COUNTED, NONE TYPED

Overall	RED
Website	LIVE at https://6s-success.com
Revenue this month	\$0 of \$20,000
Paying customers	0
Email list	0
Can take payment	no
Commits, 7 days	49

The one constraint

The business cannot accept money. Checkout is staged and there is no payment processor anywhere in the site. All 14 forms now hand off to email by hand, which keeps a visitor's intent but stores nothing and builds no list. Nothing else moves revenue until this does.

Domain and hosting

What	State
6s-success.com	LIVE, A record 187.77.25.50
www	CNAME to apex, follows automatically
TLS	Let's Encrypt, both names, renews automatically
Production host	187.77.25.50, shared with two other projects
Site container	port 8973, behind Nginx Proxy Manager
Deploys	push to main, image builds, host pulls within five minutes
Mail	support@6s-success.com sends and receives

Products: deliverable against listed

The catalogue lists 41 items. Three are deliverable today and all three are consulting. The rest need either a supplier, a platform, or the front matter that blocks the book and the manual together.

Offer	State	What it needs
Virtual Home Consult, \$250	Deliverable	your calendar

In-Home Reset Day, \$1,200	Deliverable	your calendar
Corporate Lean 6S	Deliverable	quoted, so an invoice
Book, 50 of 50 chapters	Finished, blocked	front matter, issue 3
Manual, 114 zones	Finished, blocked	front matter, issue 3
Reset kits, 4 SKUs	Not built	a supplier and stock
Courses, 4 SKUs	Not built	a platform and a schedule
Tools, 24 SKUs	Not built	a supplier
Card decks, 2 of 20 rooms	Not built	art, issues 1 and 2
Video, 0/114	Not started	filming

Stripe

Item	State
Account	6S Success sandbox, test mode, US and USD
Products created	Virtual Home Consult and In-Home Reset Day
Deliberately not created	kits, courses, tools, book, manual
Why	a buy path must not sit in front of something that does not exist
Before the first charge	terms still say ordering is not live, and there is no refund policy

Content

Asset	Measured
Website	14 pages, 0 dead links, 4 of 4 legal pages
Book	50 chapters, 261,876 words, EPUB 0.81 MB
Micro zones	20 rooms, 114 zones
Free sample	40.0 MB, was 50.7
Social corpus	about 2,600 units written, none published
Privacy	zero third party requests, no analytics, no trackers
House style	0 em and 0 en dashes, site and control layer

Experiments

10 designed, 0 executed. Until today there was no traffic to run one on. Now that the site is public the programme can start, and any result text already in EXPERIMENTS.md is illustrative rather than measured.

ID	Experiment
EXP-0001	Entryway Desired Function Before Micro-Zone
EXP-0002	Short vs Guided Desired-Function Flow
EXP-0003	15-Minute Entryway Quick Quest
EXP-0004	Root-Cause Guided Quest Recommendation
EXP-0005	Digital Entryway Deck Paid Offer
EXP-0006	Entryway Product Bundle
EXP-0007	High-Impression Entryway Search Page Improvement
EXP-0008	Multiplayer Voluntary Card Selection
EXP-0009	Micro-Zone Sustainment Check
EXP-0012	Gamified timer increased starts but reduced completion.

What needs you

#	Decision
#14	Decide: the free sample is 40 MB and is 89 percent of the site
#13	Decide: grant the host read access so the site can actually be deployed
#12	Decide: model for the four-hour autonomous loop, Sonnet or Opus
#11	Decide: which email provider holds the list, and authorise the spend
#9	15 referenced control documents do not exist
#8	Two different documents both named EXECUTIVE-DASHBOARD
#7	Decide: keep or discard the 2,786-card master plan
#3	Fill in front matter bracketed fields and get counsel review

Retrospective

2026-08-19 12:50 (RISK-0009 term triage, autonomous operator)

What went wrong. CLAUDE.md, the document every agent reads first and that states "Write Straighten, never Set in Order" in its own text, was itself violating that rule in its Core 6S Model list, with Safety sixth too. Nobody had read it against its own rule before now.

What changed. When a rule and an example of the rule's violation can both be true of the same document, check the document against its own rule, not just against the content it governs.

2026-08-19 (continuous delivery, run from the desk)

What went wrong. I nearly reported a false "stale build" finding. I compared byte counts between the local file and the served one and saw 14,078 against 13,552. The difference was exactly 526, which is exactly the file's line count: Windows CRLF locally against LF in the image. Comparing content after stripping carriage returns showed them identical.

What changed. Never compare a Windows working copy to a served file by byte count. Compare content with line endings normalised, or compare a hash of the normalised bytes.

2026-08-19 (LAUNCHED)

What went wrong. I reported the free sample as a 404 before checking why. It was renamed by an earlier pass, correctly, from "Complete Book" to "Sample (Chapters 1-30)", and every real link on the site resolves. I had tested a hardcoded old path rather than the links the site actually contains. A false alarm on launch day, from the tool that exists to prevent false alarms.

What changed. Check links by extracting them from the pages, never by typing a path from memory. `verify_deploy.py` should read hrefs out of the served HTML rather than carrying its own list, which is the same defect as the "rooms" page it invented yesterday. Twice now, so this is the process fix, not a patch.
